

## Water jet pump type 601

Water jet pump for taps with smooth outlet pipe

- » Brass, nickel-plated
- » Optionally with non-return valve (+Rü)

The water jet pump type 601 is pushed as far as possible onto the outlet pipe of the water tap, whereby it is advisable to moisten the rubber insert with water beforehand. The retaining chain is then placed crossed around the toggle axis of the stopcock, the chain is tightened and hooked in place.
